Create a Mind Map for Global warming

Summary Article: **Global Warming** from *Encyclopedia of Global Warming and Climate Change*

Image from:
Greenhouse gases (A) are fairly transparent to... from Guide to Global Hazards

GLOBAL WARMING IS a term that is used to refer to an increase in Earth's average surface temperature. It is due mostly to the release of greenhouse gases (GHGs) into the atmosphere by human-fueled activities such as increased fossil fuel consumption leading to the release of carbon dioxide (CO₂), the increasing use of automobiles, the use of nitrogen base fertilizers, and rearing and breeding large methane-belching cattle. Greenhouse gases such as carbon dioxide, nitrous oxide, water vapor, halocarbons (chlorofluorocarbons and hydrofluorocarbons), methane, and ozone have the capability of absorbing infrared radiation from the Earth's surface, thereby altering the heat balance of the Earth.

The gases later warm the Earth's surface by emitting trapped energy. When GHGs absorb radiation, the stratosphere becomes warm and then re-emits infrared...
