1. システム要件

AORN eGuideline+の web 環境要求要件:

Browser 要件: Edge v98+, Firefox v96+, Chrome v98+, Safari v15+

Google Chrome, Firefox, MS Edge, Safari, 又は Opera の最新版推奨

Internet 接続推奨環境: 500+Kbps

備考: Android 及び IOS モバイルブラウザはサポート対象となります。

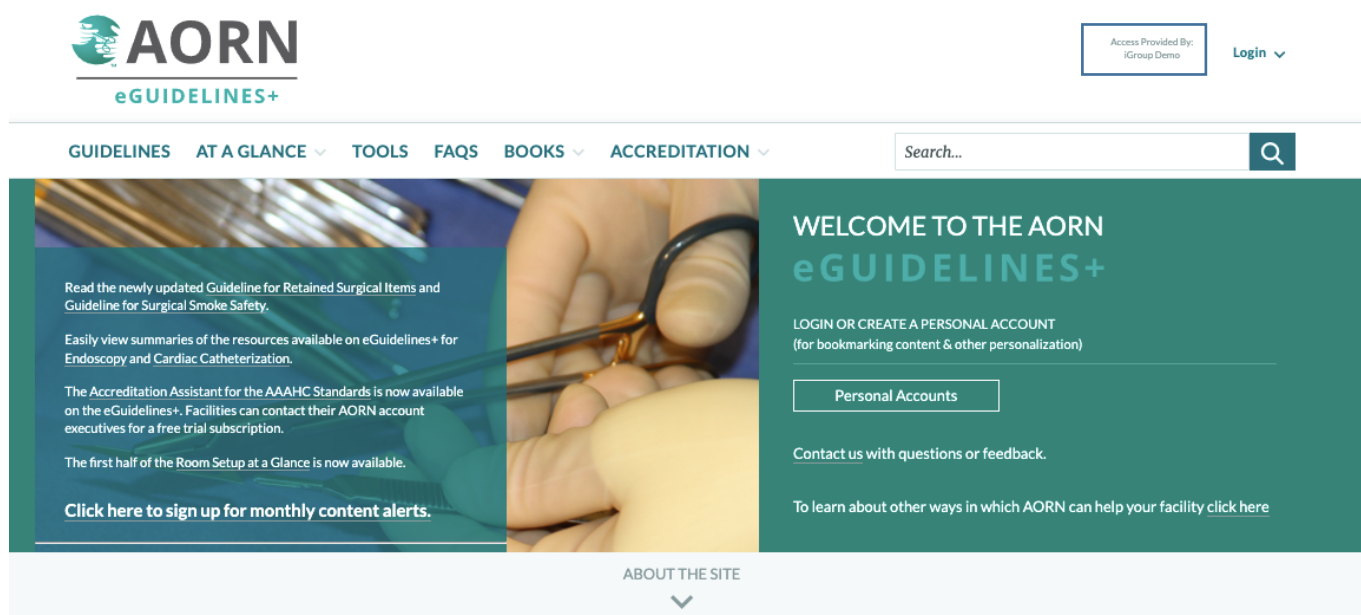

Mobile Apps については、My AORN Mobile という Apps を GooglePlay 又は AppStore からダウンロードいただき、ブラウザ上で作成した個人用のアカウントでアクセスいただく形となります。

他の Mobile Apps も個人アカウントにアクセスすることができますが、利用できないコンテンツも多いため注意が必要です。

2. ログイン

2-1. IP 認証のログイン

AORN eGuideline+へのアクセスは、<https://aornguidelines.org> のサイトから行います。すでに AORN で IP 認証がなされている場合は、下記の□図のように施設名が表示されます。

施設名が表示されている場合は、IP 認証でのアクセスであることを示しております。

2-2. 個人用ログイン

上図の右側の Login をクリックいただくと下記の画面が表示されます。

最初は右側の□ Create new account に email アドレスを入力いただき、Continue をクリックしてください。

2 回目以降利用する場合は、左側の□に email とパスワードを入力し、ログインしてください。

2-2-1. Favorite 機能

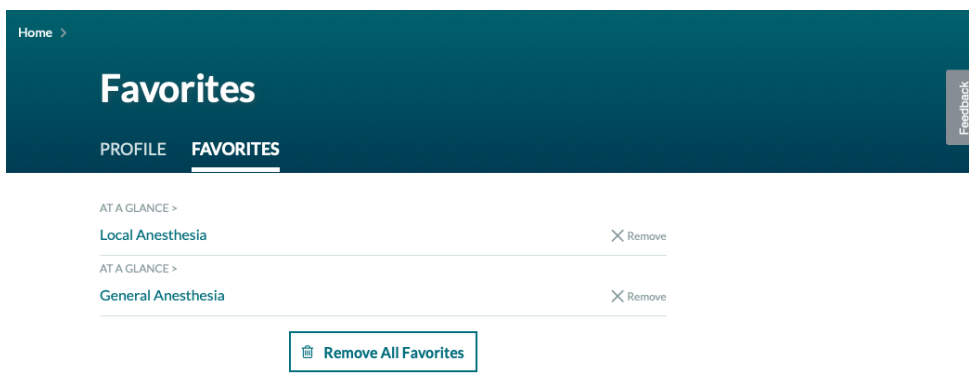

個人アカウントが作成されますと下記のような画面が表示され、右側に氏名が記載されます。

個人アカウントの Favorite 機能を利用するためには、各項目で、☆マークをクリックして、★マークにすることで、個人アカウントの Favorite サイトに登録されます。

登録された Favorites は以下のように表示され、次回個人アカウントにログインして、Favorites 項目を確認することで、ワンクリックで、必要な項目までジャンプします。

2-3. AORN Mobile を介した個人用ログイン

AORN のモバイル Apps を Google Play 又は Appstore でダウンロードいただき、下記の通り、個人用のアカウントにてログインいただくことで、下記の通り、モバイルアプリ経由でもご利用いただくことができます。

注意：下記のアプリについては、IP 認証であれば指定の IP 配下のネットワークでの利用に限り、ご利用いただくことができます。

3-2. GUIDELINES -BOOK VIEW

Guideline の項目は、原著の 2022 AORN Guidelines for Perioperative Practice の内容がベースになっており、36 の Topics 中、毎年、5 – 6 項目が更新され提供されます。

2022 年は下記の 6 項目が更新となりました。

- Complementary Care
- Moderate Sedation/Analgesia
- Patient Skin Antisepsis
- Radiation Safety
- Retained Surgical Items
- Surgical Smoke Safety

Recommendations

1. Selecting Interventions

[Print Recommendation](#)

- 1.1. Convene an interdisciplinary team to review, select, and evaluate complementary care interventions that will be used in the health care organization^{1,16} [Recommendation]

Using an interdisciplinary team approach can facilitate buy-in from perioperative team members and other health care personnel¹⁶

- 1.1.1. The interdisciplinary team may include

- 1.2. Follow applicable local, state (eg, scope of practice¹⁶), and federal laws when defining and implementing complementary care interventions that will be used in the organization¹⁶ [Regulatory Requirement]

- 1.3. When selecting complementary care interventions that may be used in the organization, review the

- 1.4. When selecting individualized complementary care interventions, take into account information obtained from a comprehensive patient assessment (see Recommendation 2.1)^{1,15,17-21} [Recommendation]

Room Setup at a Glance: General Surgery

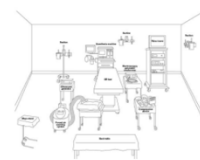

Contents

Basic equipment
Specialty equipment
OR Bed and attachment
Reference

目次

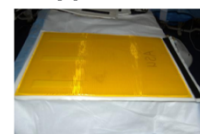

Share

General surgical cases have common equipment that need to be present in the OR in order to successfully care for the surgical patient. Although each surgeon has specific items depending on the patient condition, the type of surgical procedure, and personal preference, it is important to have basic equipment, specialty equipment, an OR bed, mayo stand, and a back table to perform all general surgery cases. Variations exist with the approach of the procedure being open surgical approach or minimally invasive via a laparoscope.

[View Large Figure](#)

Basic equipment

- Gel pads: Silicone gel made in different sizes and shapes that help reduce a patient's pressure injury during surgery.

Can a medical-surgical vacuum be used to evacuate surgical smoke? >

Yes, when a small amount of surgical smoke is anticipated, a medical-surgical vacuum with an in-line surgical smoke filter (ie, ULPA and activated carbon filter) may be used.

Should smoke evacuation and filtration systems be used during minimally invasive surgical procedures when surgical smoke is anticipated? >

Yes. There are many options for surgical smoke evacuation and filtration during minimally invasive procedures.

What are ULPA and activated carbon filters? >

An ultra-low particulate air (ULPA) filter demonstrates an efficiency of no less than 99.999% at a most penetrating particle size (MPPS) (eg, 0.12 μ m).

What actions should we take if the smoke management system does not seem to effectively evacuate and filter the surgical smoke during the procedure? >

If the surgical smoke evacuation system is ineffective, the team should evaluate the system to
